

HSE TOOLBOX TALK

EYE AND FACE PROTECTION TOOLBOX TALK

PURPOSE AND SCOPE

Review flying-particle, chemical-splash, spark, radiation and pressurised-fluid hazards that can cause eye and facial injuries during grinding, cutting, welding, chemical handling, pressurised-system intervention and dusty work, and verify that suitable safety glasses, goggles, face shields or welding protection have been selected before the task begins.

KEY HAZARDS

1  High-velocity metal, stone or other hard	2  Chemical burns to the eyes or face caused by	3  High-pressure release of liquid or debris from	4  Ultraviolet and infrared radiation from welding
5  Grinding and hot-work sparks contacting the	6  Dust, burrs and fine particulates entering the	7  Dirty, scratched, fogged or damaged eyewear	8  Incorrect lens type, shade level or unsuitable

CRITICAL POINTS TO VERIFY IN THE FIELD

01

High-velocity metal, stone or other hard particles striking the

02

Chemical burns to the eyes or face caused by splashes of acids,

03

High-pressure release of liquid or debris from hoses, fittings or

FIELD REQUIREMENTS AND VERIFICATION

Review flying-particle, chemical-splash, spark, radiation and pressurised-fluid hazards that can cause eye and facial injuries during grinding, cutting, welding, chemical handling, pressurised-system intervention and dusty work, and verify that suitable safety glasses, goggles, face shields or welding protection have been selected before the task begins.

SERNEM FIELD 01

FIELD VERIFICATION 1

Eye and face hazards identified

SERNEM FIELD 02

FIELD VERIFICATION 2

Safety glasses suitable for the task

SERNEM FIELD 03

FIELD VERIFICATION 3

Face-shield requirement assessed

SERNEM FIELD 04

FIELD VERIFICATION 4

Chemical-goggle requirement assessed

VERIFICATION BEFORE START

- | | |
|---|---|
| ☐ Eye and face hazards identified | ☐ Safety glasses suitable for the task |
| ☐ Face-shield requirement assessed | ☐ Chemical-goggle requirement assessed |
| ☐ Lenses and equipment undamaged | ☐ Welding shade suitable |

SUPERVISOR DISCUSSION POINTS

- What can reach the eyes or face during today's task: particles, splash, dust, radiation or pressurised fluid?
- Are standard side-shield safety glasses sufficient, or are goggles or a face shield also required?
- During grinding or cutting, where will sparks and high-speed particles travel?

FIELD APPLICATION

Use the correct eye and face protection against flying particles, chemical splash, sparks, dust and optical radiation.

EYE AND FACE PROTECTION TOOLBOX TALK

CRITICAL CONTROL MEASURES

1. ELIMINATE / REDUCE THE RISK

Assess mechanical-particle, chemical-splash, dust, radiation and pressurised-fluid hazards separately before starting. • Use welding protection with the correct lens shade for the specific welding process. • Ensure eyewash and, where required, emergency showers are unobstructed, accessible and operational during chemical work.

2. ENGINEERING & PHYSICAL CONTROLS

Use suitable impact-rated safety glasses with side protection for general mechanical work. • Protect nearby workers from welding radiation and flying material using welding screens, barriers or suitable separation. • Barricade the work area and ensure everyone exposed to particles, sparks, splash or radiation uses appropriate protection.

3. WORK METHOD & FIELD CONTROLS

Use a suitable face shield in addition to safety glasses for grinding, cutting and other high-energy particle work. • Inspect glasses, lenses and face shields before use for cracks, scratches, loose components, contamination and restricted visibility.

4. PPE, VERIFICATION & SUPERVISION

Use properly fitting chemical splash goggles and, where required, a chemical-resistant face shield for splash hazards. • Remove damaged or vision-restricting eye and face protection from service and replace it.

CRITICAL WARNING

Team, today we are not simply checking whether everyone is wearing glasses. We will first identify the actual eye and face hazard. Grinding and cutting will require a face shield in addition to suitable safety glasses. Chemical splash work will require correctly fitting splash goggles. Welding protection must have the correct shade, and nearby personnel will be protected by welding screens. Scratched, broken or vision-restricting equipment will not be used. Eyewash access will remain clear during chemical work. If we are not certain the protection matches the hazard, the task will not start.

SITE CHECKLIST — BEFORE STARTING WORK

HSE TOOLBOX TALK

EYE AND FACE PROTECTION TOOLBOX TALK

- ☐ Eye and face hazards identified
- ☐ Face-shield requirement assessed
- ☐ Lenses and equipment undamaged
- ☐ Eyewash accessible
- ☐ Nearby workers protected
- ☐ Safety glasses suitable for the task
- ☐ Chemical-goggle requirement assessed
- ☐ Welding shade suitable
- ☐ Work area barricaded
- ☐ Crew briefed on required PPE
