

HOT WORK TOOLBOX TALK

Prevent fires during welding, cutting and grinding.

5-10 MINUTES

OBJECTIVE

Confirm the permit, combustible controls, gas testing, fire watch and post-work inspection before hot work begins.

KEY HAZARDS

- Sparks and hot particles causing fire.
- Ignition of flammable gases, vapours or materials.
- Damaged cables, hoses, regulators or equipment.
- Hidden embers or combustion after work is completed.

CONTROL MEASURES

- Do not begin without a valid permit and required gas tests.
- Remove combustibles or protect them with suitable fire-resistant covers.
- Provide a trained fire watch and an appropriate extinguisher.
- Inspect the area after completion and continue monitoring as required.

DISCUSSION QUESTIONS

- Where are the extinguisher and alarm point?
- Who is today's fire watch?
- How long will post-work monitoring continue?
